

## Global Citizenship School Resource Pack

This pack of ideas and information is a fantastic resource which will help schools and their students develop ideas of Global Citizenship with particular reference to water and its importance for all of us. The activities can help to fulfil your requirements for educating students in PSHE and Global Citizenship and can also play an active part in teaching students the importance of valuing natural resources.

### The key elements of this pack are as follows:

- **Facts & Figures** - an introduction to worldwide water and why water is set to become such an important issue in all our futures.
- **Posters** - to display around school and so raise project awareness. They can also be used as a visual aid and a starting point for class discussions
- **Lesson ideas** – materials for both junior and secondary level lessons including a quiz, science experiments, geography work using maps and English in written work, internet research and discussion points. Why not start your project with the quiz and set your students the challenge of finding the answers?
- **Links to other sites for information on Water** – if you want to pursue the subject further this can give you starting points for further investigation by your students
- **Contacts in Ethiopia** – why not set up links with a school or a women's group in Ethiopia then email or write to them?
- **Outline of Action Ethiopia's Community Based Water Development Project** – including how to request a school visit from our education specialist (Piers Langdon) who was born in Ethiopia. He can talk to classes from experience and show slides to kick start your project
- **Ideas on the H<sub>2</sub>O Walk for Water** - how to organise a walk at your school to raise both money and awareness about the use of water
- **Ideas for other ways to raise funds** – non uniform days etc.
- **Sponsorship form** - and details of how to send money through the Just Giving website

*Global learning and education for sustainability address environmental, social and economic issues that are of importance to young people. This can make learning more relevant to their lives and have a positive impact on engagement and achievement.*
